Introduction:

Online insurance management system is a web application which is developed for tracking the details of the insurance policy, customer details and company details. The website is an online insurance analysis and information regarding the people and resources of insurance.

Objectives:

This project is mainly towards persons who are willing to buy insurance for their vehicles. Through this website it will be easier to find a suitable The main intend of building this website is to provide users to choose their budget and best package for their vehicle.

We have tried to maintain all the information of the insurance plan which is easily understandable to the users which makes it easy to find the plan.

Description:

Online Vehicle Insurance website is to provide services for the people who are in need of insurance by getting help from the agents. There are seven main modules in this system.

User Login:

In the login section, a user can log in to his account using user id and password to share and update all the information like vehicle type, age, location, last insurance date, contact number and he/she can submit the information.

Login/Sign-Up:

In this module user can register their plan in which he/she is interested by providing the vehicle number, PUC, other papers of the vehicle, E-Mail, and ID proof. He was also given two fields' username and password to fill such that he was a registered user and he can enter the login form with his username and password and can modify his details if needed.

Why take insurance:

In this module, people who are interested insurance but have some confusion will find some Q&A here like,
